# WE UPDATED EVERYTHING

The 2013 Parts Unlimited Update is more than “just another catalog.” The Update features new, exciting parts and accessories for every market: Street, Offroad, ATV & UTV, Snow and Watercraft. If it is new and cool, you will find it in here.

Plus there’s more! We added sections for our Helmet & Apparel and Tire catalogs. The Apparel section showcases the newest riding gear and stylish casuals. The Tire section features the newest tires and sizes for two- and four-wheeled machines.

The end result is our biggest update catalog yet! Team it up with our existing catalogs and keep this season going strong!

# BACK-TO-BACK-TO BACK

Parts Unlimited and Ryan Villopoto put in another championship performance during a 2013 Monster Energy Supercross season that ended with Villopoto's third-straight title. Villopoto moved higher in the record books, becoming one of only four riders to ever win three straight titles. He recorded a career-best 10 race victories while wrapping up the points chase with a race to spare. You'll find that same championship-level of performance in all the new products featured in the 2013 Parts Unlimited Update.

MUFFLERSFOR HONDA  
GL1800 GOLD WING

<sup>1</sup> The Revolver VR throttle does not have the starter and kill switch wiring or switches that are built into your stock throttle assembly. MP optional starter/kill switch PART #0616-0108 does not include a MODE function switch so the OEM throttle assembly must be used to retain the MODE function. It may be necessary to shorten the Revolver throttle tube and grip or install handlebars at least 50mm wider on the right side and mount the modified OEM throttle assembly behind the Revolver throttle housing. Installation should be done by a qualified mechanic.

**SUPER COIL KITS FOR UNIVERSAL APPLICATIONS**

- High-output coils for use in either 2- or 4-cylinder motorcycles
- Motorcycles with point or electronically triggered ignitions use PART #2102-0265 or #2102-0266
- Bikes equipped with capacitive discharge ignition (CDI) use PART #2102-0267 or #2102-0268
- ACCEL engineers designed these coils' special low-resistance primary winding to match the operating characteristics of factory and aftermarket CDI systems
- Maximum performance with fast rise times
- Extra-heavy-duty 9 mm silicone wires included
- Available in black
- Made in the U.S.A.

2102-0266

2102-0265

**NOTE: Using the wrong coil may damage your motorcycle's electronic ignition module. To determine your ignition type, complete the following test:**

1. Determine whether the type of coil you are replacing is a high tower coil. (These coils will NOT replace single tower coils.)
2. Using a volt meter or 12V test light, hook the positive lead to the positive post and the negative lead to the ground on one of the stock coils.
3. Turn the ignition on, but DO NOT engage the starter button.
4. If there are 12V at the coil, the motorcycle has an inductive type ignition. If there is no voltage at the coil, then the motorcycle has a CDI ignition because the power goes to the control box first.

## SUPER COIL KITS FOR UNIVERSAL APPLICATIONS

2102-0266

- High-output coils for use in either 2- or 4-cylinder motorcycles
- Motorcycles with point or electronically triggered ignitions use PART #2102-0265 or #2102-0266
- Bikes equipped with capacitive discharge ignition (CDI) use PART #2102-0267 or #2102-0268
- ACCEL engineers designed these coils' special low-resistance primary winding to match the operating characteristics of factory and aftermarket CDI systems
- Maximum performance with fast rise times
- Extra-heavy-duty 9mm; silicone wires included
- Available in black
- Made in the U.S.A.

**NOTE: Using the wrong coil may damage your motorcycle's electronic ignition module. To determine your ignition type, complete the following test:**

1. Determine whether the type of coil you are replacing is a high tower coil. (These coils will NOT replace single tower coils.)
2. Using a volt meter or 12V test light, hook the positive lead to the positive post and the negative lead to the ground on one of the stock coils.
3. Turn the ignition on, but DO NOT engage the starter button.
4. If there are 12V at the coil, the motorcycle has an inductive type ignition. If there is no voltage at the coil, then the motorcycle has a CDI ignition because the power goes to the control box first.

## TRIGA iBOOST2

- Developed by TRIGA Engineering, a company from in the Netherlands that uses state-of-the-art 3D software and top-level technical knowledge to engineer, develop and produce high performance fuel injection systems
- Now available at Pro Circuit, TRIGA's iBoost2 is an off-the-shelf, easy-to-install throttle body enhancement kit that will give you more power and better throttle response
- Kits include TRIGA's Throttle Body Insert (TRIGA-TBI) and TRIGA Butterfly Valves (TRIGA-TBV)
- TRIGA-TBI improves the volumetric efficiency of the engine by applied Pressure Wave Tuning (PWT)
- Up and down running pressure wave in the intake system is tuned to ensure the positive peak of the pressure wave is there when the intake valve opens
- Using the TRIGA tubular insert will slightly reduce the overall flow area, which will allow enhanced speed over the valve while timing the pressure waves for low and mid-range power improvements
- On the track, using the TRIGA butterfly valve will increase top-end power – the TRIGA tubular insert will utilize some of this extra power and distribute it over the entire rpm range
- The flow-engineered butterfly valves and shaft are CNC-precision-machined from steel, which allows for less material use and optimal shape to eliminate high-end flow loss by lowering flow restriction
- Throttle control via the butterfly valve is known for its low-flow loss up to 75% of TPS; the high range flow is more restricted because the valve is still horizontally present
- The TRIGA butterfly valve reduces the restriction in the throttle body, which decreases the overall pressure drop over the throttle body at full throttle
- This results in higher velocity for improved fuel droplet breakup. This also improves the fuel-air mixture while allowing more air mass flow to enter the combustion chamber – more air, more fuel, more power
- On the track, using the TRIGA butterfly valve will increase top-end power; the TRIGA tubular insert will utilize some of this extra power and distribute it over the entire rpm range
- Kits offer two installation configurations
- Option 1 can significantly increase horsepower in low, mid and top range
- Option 2 can significantly increase horsepower in top range
- Easy-to-use and install
- Significant increase in torque and power throughout the power band
- Throttle body insert improves the volumetric efficiency of the engine
- Butterfly valve and shaft eliminates high-end flow loss by lowering flow restriction
- Can be installed and uninstalled without damaging the OEM throttle body
- Allows for significantly better throttle response
- No service necessary after installation
- Can be installed in a stock bike without changing the fuel mapping or tuning
- TRIGA TPS Tool (sold separately) is needed to recalibrate the TPS sensor after installing the TRIGA valve and shaft; correct TPS sensor calibration is essential to the performance of the iBoost2

## AIR4ORCE TUNABLE INTAKE SYSTEM FOR SUZUKI RM-Z450 13

- Change power characteristics to match rider preference and track conditions using interchangeable velocity stacks
- Depending on the selected velocity stack, the rider will experience increased bottom and mid-range power (longer stack) or mid- to top-range power (shorter stack)
- Improved throttle response with either stack installed
- Velocity stacks function as resonating pipes; the length of the pipe alters the dynamic tuning range by adjusting the frequency of pressure pulses within the tract
- System includes AIR4ORCE tunable intake system, two velocity stacks, detailed instructions and hose clamps and gaskets (for models that require them)
- Please see page 757 of the 2013 Parts Unlimited Offroad catalog for the entire line of AIR4ORCE Tunable Intake Systems

## HEAVY-DUTY AXLES WITH VOODOO AXLE TECHNOLOGY

•If your ATV or UTV has a lift kit or extended A-arms and requires long travel suspension, you need Moose Heavy Duty Axles With Voodoo Axle Technology

•Our revolutionary design provides ultra-high strength and the ability to operate at angles others can't

### INCREASED RANGE OF MOTION

- To accommodate suspension travel the axles utilize a slip spline that allows the axle to compress and extend 2"
- This helps to prevent disengagement of the inner CV joint from the transaxle when the suspension is at full droop
- Telescoping axle bars are carried on linear motion ball bearings for smooth action that won't bind under load

### INCREASED OPERATING ANGLE

- Typical axles use inboard CV joints that must both operate at an angle, and allow suspension travel. This dual purpose design limits articulation angle to about 25°, while travel is limited to 1.25" - 1.5", which is inadequate for ATVs and UTVs with lift kits, or long-travel suspension
- These axles utilize fixed Rzeppa inner CV joints that allow 45° of articulation, while a slip spline in the axle shaft provides 2" of travel

## IMPORTANT INFORMATION RELATING TO EXHAUST PRODUCTS:

**DISCLAIMER:** There is no warranty on exhaust pipes and mufflers with regard to any discoloration. Discoloration (blueing) is caused by tuning characteristics, i.e. cam timing, carburetor, EFI tuning/MAPs, etc., and is not caused by defective manufacturing. See the **HARDWARE, CHEMICALS & TOOLS** section for products that will help prevent or remove blueing.

**DISCLAIMER:** Exhaust systems for OEM non-emission control system equipped vehicles, as well as slip-on mufflers that mount downstream of and which do not inhibit the proper function of emission control systems, are considered legal replacement parts by the California Air Resources Board (CARB). CARB does not, however, permit the use of aftermarket exhaust systems that remove or alter OEM emission control devices unless certified by CARB, other than on racing vehicles on closed courses. More California exhaust information is available at [www.arb.ca.gov/](http://www.arb.ca.gov/).

**DISCLAIMER:** Products shown may be designed, manufactured, intended and sold for use on competition vehicles that are operated only on closed course racing circuits unless otherwise noted, and use of the same on public roads or lands may be a violation of local, state and/or federal laws.

**DISCLAIMER:** Check your applicable laws and manufacturer's publication(s) and/or website(s) for manufacturer's warranty, maintenance, safety, mounting and any regulatory compliance/non-compliance information.
